

Bugs found: 5

1. Memory leak: `malloc()` in `leak()` allocates memory that is never freed.
2. Uninitialized variable: `'uninit'` is read with `printf()` before being assigned a value.
3. Missing `#include`: `strncpy()` is used without including `<string.h>`.
4. Buffer over-read write: `strncpy()` copies 15 bytes into a 10-byte buffer `'str'`, writing beyond its bounds.
5. Double free: `free(p)` is called twice on the same pointer, causing undefined behavior.
