

Bugs found: 5

1. Reading the uninitialized variable 'uninit' causes undefined behavior.
2. Memory allocated for 's' is never freed, causing a memory leak.
3. The string buffer 's' is not null-terminated after writing characters.
4. The loop writes past the end of 'arr' because it iterates with $i \leq 5$.
5. Accessing 'arr[2]' after freeing 'arr' is a use-after-free bug.
