

Bugs found: 5

1. Uninitialized variable 'uninit' is read before being assigned any value.
2. Memory leak: allocated buffer 's' (10 bytes) is never freed.
3. Buffer 's' is not null-terminated, making it an invalid C string.
4. Off-by-one error: loop condition 'i <= 5' writes to arr[5], one element past the allocated 5-element array (indices 0–4).
5. Use-after-free: 'arr' is accessed at arr[2] after being freed.
