

Bugs found: 7

1. Variable 'uninit' is used in a conditional expression without being initialized.
2. The return value of 'malloc(10)' for pointer 's' is not checked for NULL.
3. The character array 's' is not null-terminated.
4. The return value of 'malloc(5 \* sizeof(int))' for pointer 'arr' is not checked for NULL.
5. Off-by-one error in for-loop condition 'i <= 5' causes an out-of-bounds write to 'arr[5]'.
6. Use-after-free bug: 'arr[2]' is accessed after 'free(arr)' has been called.
7. Memory leak: the memory allocated for pointer 's' is never released using 'free()'.
