

Bugs found: 4

1. Buffer too small: array 's' is declared with size 4 but only 3 elements are assigned, leaving no room for a null terminator, which is required for safe string handling.
2. Missing null terminator: s[3] is never assigned '\0', so the string is not properly null-terminated.
3. Off-by-one error in loop condition: the loop uses 'i <= 4' which iterates indices 0 through 4 (5 iterations), but valid indices for s[4] are only 0 through 3.
4. Out-of-bounds array access: the loop accesses s[4] at i=4, which is beyond the array's declared size of 4 (valid indices: 0-3), causing undefined behavior.
