

Bugs found: 3

1. `ConcurrentModificationException`: `list.add(2)` modifies the list while iterating with an active iterator, which is illegal and throws at runtime.
2. Infinite loop: the while loop calls `it.hasNext()` but never calls `it.next()`, so the iterator never advances and loops forever.
3. `NullPointerException`: array 'a' is null, so accessing `a[0]` throws a `NullPointerException` at runtime.
