

Bugs found: 4

1. Race condition/Thread-safety: `java.util.ArrayList` is not thread-safe for concurrent access.
2. Deadlock: Potential deadlock between two threads locking objects A and B in reverse order.
3. Integer Overflow: Adding `Integer.MAX_VALUE` to itself results in numerical overflow.
4. `ClassCastException`: Attempting to cast a `String` object to an `int` primitive will cause a runtime exception.
